

Methodologie

Structuur van het boek

Hoofdstuk 1 – Introduction, Acquiring knowledge and the scientific method

1.1 Introduction to research methodology p3

1.2 Methods of knowing and acquiring knowledge p4

- « The method of tenacity p5
- « The method of intuition p6
- « The method of authority p6
 - The method of faith p8
- « The rational method p9
- « The empirical method p12

1.3 The scientific method p15

- « Step 1: observe behavior or other phenomena p16
- « Step 2: Form a tentative answer or explanation (hypothesis) p16
- « Step 3: Use your hypothesis to generate a testable prediction p17
 - Deduction or deductive reasoning p18
- « Step 4: Evaluate the prediction by making systematic, planned observations p19
- « Step 5: Use the observations to support, refute or refine the original hypothesis p19

Other elements of the scientific method p20

- Science is empirical p20
- Science is public p22
- Science is objective p22
- Science vs pseudoscience p23

1.4 The research process p25

- « Quantitative and qualitative research p25
- « The steps in the research process p26
 - Step 1: Find a research idea: select a topic and search the literature to find an unanswered question p28
 - Step 2: Form a hypothesis p29
 - Step 3: Determine how you will define and measure your variables p29
 - Step 4: Identify the participants or subjects for the study, decide how they will be selected and plan for their ethical treatment p30
 - Step 5: select a research strategy p31
 - Step 6: select a research design p31
 - Step 7: conduct the study p31
 - Step 8: Evaluate the data p32
 - Step 9: Report the results p32
 - Step 10: Refine or reformulate your research idea p32

Hoofdstuk 2: Research ideas and hypotheses

2.1 Getting started p39

- « Pick a topic in which you are interested p39
- « Do your homework p39
- « Keep an open mind p40
- « Focus, focus, focus p40
- « Take one step at a time p41

2.2 Sources of research ideas	p41
<u>Common sources of research topics</u>	p41
1) Personal interests and curiosities	p41
2) Casual observation	p41
3) Reports of other's observations	p42
4) Practical problems or questions	p42
5) Behavioral theories	p43
2.3 Finding background literature: conducting a literature search	p43
« Primary and secondary sources	p44
« The purpose of a literate search	p46
« Preparing for a literature search	p48
« Using online databases	p49
« Using psycinfo	p51
« Screening articles during a literature search	p51
« Ending a literature search	p52
2.4 Finding an idea for a research study from a published research article	p53
« Find suggestions for future research	p53
« Combine or contrast existing results	p53
« The components of a research article – critical reading	p54
2.5 Using a research idea to form a hypothesis and create a research study	p56
<u>Characteristics of a good hypothesis</u>	p57
1) Logical	p57
2) Testable	p57
3) Refutable	p58
4) Positive	p59
<u>Using a hypothesis to create a research study</u>	p60
Hoofdstuk 3: Defining and measuring variables	p63
3.1 An introduction to measurement	p64
3.2 Constructs and operational definitions	p66
« Theories and constructs	p67
« Operational definitions	p67
« Limitations of operational definitions	p68
« Using operational definitions	p69
3.3 Validity and reliability of measurement	p70
« Consistency of a relationship	p70
« Validity of measurement	p72
1) Face validity	p73
2) Concurrent validity	p73
3) Predictive validity	p74
4) Construct validity	p74
5) Convergent and divergent validity	p75
« Reliability of measurement	p76
« Types and measures of reliability	p78
« The relationship between reliability and validity	p79

3.4 Scales of measurement	p80
« The nominal scale	p81
« The ordinal scale	p81
« Interval and ratio scales	p81
« Dealing with equivocal scales	p83
« Selecting a scale of measurement	p84
3.5 Modalities of measurement	p85
« Self-report measures	p86
« Physiological measures	p86
« Behavioral measures	p87
3.6 Other aspects of measurement	p88
« Multiple measures	p88
« Sensitivity and range effects	p89
« Ceiling and floor effect	p90
« Artifacts: experimenter bias and participant reactivity	p90
« Experimenter bias	p90
« Demand characteristics and participant reactivity	p92
« Selecting a measurement procedure	p94
Hoofdstuk 4: Ethics in research	p99
4.1 Introduction	p101
« Ethical concerns throughout the research process	p101
« The basic categories of ethical responsibility	p102
4.2 Ethical issues and human participants in research	p102
« Historical highlights of treatment of human participants	p103
« American psychological association guidelines	p105
« Informed consent	p109
« Deception	p112
« Debriefing	p114
« Confidentiality	p115
« The institutional review board	p116
4.3 Ethical issues and nonhuman subjects in research	p119
« Historical highlights of treatment of nonhuman subjects	p120
« American psychological association guidelines	p120
« The institutional animal care and use committee	p121
4.4 Ethical issues and scientific integrity	p122
« Fraud in science	p123
« Replication	p124
« Plagiarism	p124
Hoofdstuk 5: Selecting research participants	p131
5.1 Introduction to sampling	p133
« Populations and samples	p133
« Representative samples	p135
« Sample size	p136
« Sampling basics	p138

5.2 Probability sampling methods p140

- « Simple random sampling p140
- « Systematic sampling p142
- « Stratified random sampling p142
- « Proportionate stratified random sampling p144
- « Cluster sampling p145
- « Combined strategy sampling p145

5.3 Nonprobability sampling methods p146

- « Convenience sampling p147
- « Quota sampling p148

Hoofdstuk 6: Research strategies and Validity p153

6.1 Research strategies p155

- « The descriptive research strategy p156
- « Relationships between variables p156
- « The correlational research strategy: measuring two variables for each individual p157
- « Comparing two or more sets of scores: the experimental, Quasi-experimental and nonexperimental research strategies p158

- « The experimental research strategy p159
- « The quasi-experimental research strategy p160
- « The nonexperimental research strategy p161
- « Nonexperimental and correlational research p161
- « Research strategy summary p161
- « Research strategies, research designs and research procedures p161
- « Research strategies p162
- « Research designs p163
- « Research procedures p163
- « Data structures and statistical analysis p164
- « Summary p164

6.2 Internal and external validity p165

- « External validity p166
- « Internal validity p167
- « Validity of the quality of a research study p168

6.3 Threats to external validity p169

- « **Category 1:** Generalizing across participants or subjects p170
 1. Selection bias
 2. College students
 3. Volunteer bias
 4. Participant characteristics
 5. Cross-species generalizations
- « **Category 2:** Generalizing across features of a study p172
 1. Novelty effect
 2. Multiple treatment interference
 3. Experimenter characteristics
- « **Category 3:** Generalizing across features of the measures p172
 1. Sensitization occasionally
 2. Generality across response measures
 3. Time of measurement

6.4 Threats to internal validity	p175
« Extraneous variables	p175
« Confounding variables	p175
« Extraneous variables, confounding variables and internal validity	p176
« Environmental variables: General threats to internal validity for all studies	p177
« Individual differences: threats to internal validity for studies comparing different groups	p178
« Time-related variables: threats to internal validity for studies comparing one group over time	p179
6.5 more about internal and external validity	p180
« Balancing internal and external validity	p181
« Artifacts: threats to both internal and external validity	p181
« Experimenter bias	p181
« Demand characteristics and participation reactivity	p182
« Exaggerated variables	p182
« Validity and individual research strategies	p182
« Chapter summary	p183
Hoofdstuk 7: The experimental research strategy	p187
7.1 Cause-and-effect relationships	p189
1. Manipulation	
2. Measurement	
3. Comparison	
4. Control	
« Terminology for the experimental research strategy	p191
« Causation and the third-variable problem	p192
« Causation and the directionality problem	p193
« Controlling nature	p193
7.2 Distinguishing elements of an experiment	p194
« Manipulation	p195
« Manipulation and the directionality problem	p196
« Manipulation and the third-variable problem	p197
« Control	p198
« Control and the third-variable problem	p198
« Extraneous variables and confounding variables	p200
7.3 Controlling extraneous variables	p202
« Control by holding constant or matching	p202
« Holding a variable constant	p202
« Matching values across treatment conditions	p203
« Control by randomization	p204
« Comparing methods of control	p205
« Advantages and disadvantages of control methods	p206
7.4 Control groups and manipulation checks	p207
« Control groups	p207
« No-treatment control groups	p207
« Placebo control group	p208
« Manipulation checks	p209
7.5 Increasing external validity: simulation and field studies	p211
« Simulation	p212
« Field studies	p214
« Advantages and disadvantages of simulation and field studies	p214
« Chapter summary	p215

Hoofdstuk 8: Experimental designs: between-subjects design	p219
8.1 Introduction to between-subjects experiments	p220
« Review of the experimental research strategy	p221
« Characteristics of between-subjects designs	p221
« Independent scores	p222
« Advantages and disadvantages of between-subjects designs	p223
« Individual differences	p224
8.2 Individual differences as confounding variables	p226
« Other confounding variables	p227
« Equivalent groups	p227
8.3 Limiting confounding by individual differences	p228
« Random assignment (randomization)	p228
« Matching groups (matched assignment)	p229
« Holding variables constant or restricting range of variability	p230
« Summary and recommendations	p231
8.4 Individual differences and variability	p232
« Differences between treatments and variance within treatments	p235
« Minimizing variance within treatments	p235
« Standardize procedures and treatment setting	p235
« Limit individual differences	p236
« Random assignment and matching	p236
« Sample size	p236
« Summary and recommendations	p237
8.5 Other threats to internal validity of between-subjects designs	p238
« Differential attrition	p238
« Communication between groups	p239
8.6 Applications and statistical analyses of between-subjects designs	p240
« Two group mean difference	p241
« Comparing means for more than two groups	p242
« A word of caution about multiple-group designs	p243
« Comparing proportions for two or more groups	p243
« Chapter summary	p245
Hoofdstuk 9: Experimental designs: within-subjects design	p249
9.1 Within-subjects experiments and internal validity	p250
« Characteristics of within-subjects designs	p250
« Threats to internal validity to within-subjects designs	p252
« Maturation	p253
« Instrumentation	p254
« Statistical regression	p254
« Separating time-related factors and order effects	p256
« Order effects as a confounding variable	p256
9.2 Dealing with time-related threats and order effects	p258
« Controlling time	p258
« Switch to a between-subjects design	p259
« Counterbalancing: matching treatments with respect to time	p259
« Counterbalancing and order effects	p261
« Limitations of counterbalancing	p262

« Counterbalancing and variance	p263
« Asymmetrical order effects	p263
« Counterbalancing and the number of treatments	p263

9.3 Comparing within-subjects and between-subjects designs **p265**

« Advantages of within-subjects designs	p265
« Disadvantages of within-subjects designs	p270
« Choosing within- or between-subjects	p271
« Matched-subjects designs	p272

9.4 Applications and statistical analysis of within-subject designs **p274**

« Two-treatment designs	p274
« Multiple-treatment designs	p275
« Chapter summary	p276

Chapter 10: the nonexperimental and quasi-experimental strategies **p279**

10.1 Nonexperimental and quasi-experimental research strategies **p281**

« The structure of nonexperimental and quasi-experimental designs	p282
---	------

10.2 Between-subjects nonexperimental and quasi-experimental designs: nonequivalent group designs **p284**

« Threats to internal validity for nonequivalent group designs	p285
« Nonexperimental designs with nonequivalent groups	p286
• The differential research design	p286
• The posttest-only nonequivalent control group design	p287
« A quasi-experimental design with nonequivalent groups	p290
• The pretest-posttest nonequivalent control group design	p290

10.3 Within-subjects nonexperimental and quasi-experimental designs: pre-post designs **p292**

« Threats to internal validity for pre-post designs	p293
« A nonexperimental pre-post design	p293
• The pretest-posttest design	p293
« A quasi-experimental pre-post design	p294
• The time-series design	p294
« Single-case applications of time-series designs	p296

10.4 Developmental research designs **p297**

« The cross-sectional developmental research design	p298
« Strengths and weaknesses of the cross-sectional developmental design	p299
« The longitudinal developmental research design	p300
« Strengths and weaknesses of the longitudinal developmental design	p301
« Cross-sectional longitudinal designs	p302

10.5 Applications, statistical analysis and terminology for nonexperimental, quasi-experimental and developmental designs **p304**

« Application and analysis	p304
« The pretest-posttest nonequivalent control group design	p304
« Terminology in nonexperimental, quasi-experimental and developmental designs	p304
« Chapter summary	p306

Chapter 11: factorial designs	p311
11.1 Introduction to factorial designs	p313
« Experimental factorial designs	p313
11.2 Main effects and interactions	p316
« Main effects	p316
« The interaction between factors	p318
« Alternative views of the interaction between factors	p319
« Identifying interactions	p321
« Interpreting main effects and interactions	p322
« Independence of main effects and interactions	p323
11.3 Types of factorial designs and analysis	p325
« Between-subjects and within-subjects designs	p326
« Mixed designs: Within- and between-subjects	p327
« Experimental and nonexperimental research strategies	p328
« Combined strategies: experimental and quasi-experimental or nonexperimental	p328
« Pretest-posttest control group designs	p330
« Higher-order factorial designs	p331
11.4 Applications of factorial designs	p333
« Expanding and replicating a previous study	p333
« Reducing variance in between-subjects designs	p334
« Evaluating order effects in within-subjects designs	p337
« Using order of treatments as a second factor	p337
« Chapter summary	p343
Chapter 12: The correlational research strategy	p347
12.1 An introduction to correlational research	p348
« Comparing correlational, experimental and differential research	p349
12.2 The data and statistical analysis for correlational studies	p351
« Evaluating relationships for numerical scores and ranks	p351
« Evaluating relationships for non-numerical scores from nominal scales	p355
« Interpreting and statistically evaluating a correlation	p356
« The strength of a relationship	p356
« The significance of a relationship	p357
12.3 Applications of the correlational strategy	p358
« Prediction	p358
« Reliability and validity	p359
« Evaluating theories	p360
12.4 Strengths and weaknesses of the correlational research strategy	p361
« Relationships with more than two variables	p363
« Chapter summary	p365

Chapter 13: The descriptive research strategy	p369
13.1 An introduction to descriptive research	p370
13.2 The observational research design	p371
« Behavioral observation	p372
« Quantifying observations	p373
« Sampling observations	p374
« Content analysis and archival research	p374
« Types of observation and examples	p375
« Naturalistic observation	p375
« Participant observation	p376
« Contrived observation	p377
« Strengths and weaknesses of observational research designs	p378
13.3 The survey research design	p379
« Types of questions	p381
« Open-ended questions	p381
« Restricted questions	p382
« Rating-scale questions	p383
« Constructing a survey	p385
« Selecting relevant and representative individuals	p386
« Administering a survey	p387
« Internet surveys	p387
« Mail surveys	p388
« Telephone surveys	p390
« In-person surveys and interviews	p391
« Strengths and weaknesses of survey research	p391
13.4 The case study design	p393
« Applications of the case study design	p394
« Rare phenomena and unusual clinical cases	p394
« Case studies as counterexamples	p395
« Strengths and weaknesses of the case study design	p395
« Chapter summary	p398
Chapter 14: Single-subject research designs	p401
14.1 Introduction	p403
« Evaluating the results from a single-subject study	p404
14.2 Phases and phase changes	p407
« Level, trend and stability	p408
« Dealing with unstable data	p409
« Length of a phase	p411
« Changing phases	p411
« Deciding when to change phases	p411
« Visual inspection techniques	p412
14.3 The ABAB reversal design	p416
« Limitations of the ABAB design	p418
« Variations on the ABAB design: creating more complex phase-change designs	p420
14.4 Multiple-baseline designs	p423
« Rationale for the multiple-baseline design	p425
« Strengths and weaknesses of the multiple-baseline design	p427

14.5 Other single-subject designs	p429
« Dismantling or component-analysis design	p429
« The changing-criterion design	p431
« The alternating-treatments design	p432
14.6 General strengths and weaknesses of single-subject designs	p435
« Advantages of single-subject designs	p435
« Disadvantages of single-subject designs	p436
« Chapter summary	p438
